🎯 Assignment Objective

Learn how to use **Small Multiples** in Power BI to compare performance across:

- Regions
- Categories
- Sales Persons

📝 Assignment Questions

Q1. Basic Small Multiples

1. Import the Excel file into Power BI.
2. Create a **Clustered Column Chart**:
   - Axis: `Category`
   - Values: `Sum of Sales`
3. Use **Small Multiples** with:
   - Small Multiple field: `Region`
4. Question:
   Which region has the highest sales for Electronics?

Q2. Sales Trend Using Small Multiples

1. Create a **Line Chart**:
   - X-axis: `Date`
   - Y-axis: `Sum of Sales`
2. Apply **Small Multiples** on:
   - `Category`
3. Question:
   Which category shows the most consistent sales trend?

Q3. Profit Comparison

1. Create a **Bar Chart**:
   - Axis: `Sales_Person`
   - Values: `Sum of Profit`
2. Apply **Small Multiples** by:
   - `Region`
3. Question:
   Which sales person performs best in each region?

Q4. Quantity Analysis

1. Create a **Column Chart**:
   - Axis: `Sub_Category`
   - Values: `Sum of Quantity`
2. Apply **Small Multiples** using:
   - `Category`
3. Question:
   Which sub-category has the highest quantity sold in each category?

Q5. Advanced Task (Formatting)

1. Adjust:
   - Grid layout of small multiples
   - Title alignment
   - Data labels ON
2. Apply a **Report Level Filter**:
   - Date → Only January 2025
3. Question:
   How does filtering affect all small multiple visuals?

🧠 Key Learning Outcomes

✔ Understand **Small Multiples vs Normal charts**
✔ Compare performance visually without slicers
✔ Improve dashboard readability
✔ Practice formatting & filtering with Small Multiples
